Professional Summary

Self-taught Python Backend Developer specializing in automation systems, backend APIs, web scraping, and distributed workers. Experienced in building production-ready tools that automate marketplace synchronization, data collection, and B2B outreach. Passionate about designing reliable systems that solve real business problems.

Technical Skills

Languages: Python, SQL
Backend: REST APIs, SQLAlchemy, API Integrations
Databases & Storage: PostgreSQL, MongoDB, Google Sheets API
Infrastructure: Docker, Linux, Git, GitHub Actions
Automation: Web Scraping, ETL Pipelines, Distributed Workers, Scheduling, Residential Proxies
AI: Ollama (Local LLM Integration)

Projects

eMAG Product Image Synchronization System

Designed and built a production automation platform that synchronizes product images from eMAG after new products are created in Base.

- Uses the official Google Sheets API as the central job database
- Docker worker processes queued synchronization tasks
- Scrapes product images using residential proxy infrastructure
- Safe-lock mechanism prevents duplicate processing
- Retry and recovery logic for failed jobs
- Horizontally scalable across multiple workers
- Running continuously in production for 6+ months

Technologies: Python, Docker, Google Sheets API, REST APIs, Web Scraping

eMAG Market Intelligence Platform

Developed a platform for collecting and analyzing marketplace pricing data.

- Automated product discovery on eMAG
- Combined HTML scraping with hidden API endpoints
- Historical price tracking in MongoDB
- AI-powered summaries using Ollama
- Long-term market trend analysis

Technologies: Python, MongoDB, Docker, Ollama

Automated B2B Lead Generation & Outreach Platform

Created an end-to-end automation pipeline for business discovery and outreach.

- Business discovery using Overpass API
- Website analysis and lead enrichment
- Personalized email generation
- Automated scheduling with GitHub Actions
- Fully automated outreach workflow

Technologies: Python, Overpass API, Email APIs, GitHub Actions

Backend Document Management System

Built a backend application supporting secure user authentication and document management.

- Authentication system
- PDF uploads
- Image handling
- SQLAlchemy ORM
- PostgreSQL backend

Technologies: Python, PostgreSQL, SQLAlchemy

Education

Self-taught Python Backend Developer focused on backend engineering, automation, distributed systems, Linux, and software architecture.
