

ALIN EMANUEL VLASCEANU

PYTHON BACKEND DEVELOPER | Automation • APIs • Data Pipelines

Romania | alinemanuelv@gmail.com | +40 729 216 438

Portfolio | **GitHub** | **LinkedIn**

PROFILE

Python Backend Developer focused on automation, API integrations, web scraping, and data pipelines. Built and maintained a Docker-based image synchronization system running continuously for 6+ months, alongside projects in marketplace analytics, B2B outreach, and document management. Comfortable with Python, SQL databases, Linux, and production-oriented automation workflows.

TECHNICAL SKILLS

Programming: Python, SQL
Backend & APIs: REST APIs, SQLAlchemy, API integrations, authentication, file handling
Data & Automation: PostgreSQL, MongoDB, Google Sheets API, web scraping, ETL pipelines, distributed workers, scheduling
DevOps & Tools: Docker, Linux, Git, GitHub Actions, residential proxies, Ollama

SELECTED PROJECTS

eMAG Product Image Synchronization System

Production automation platform for synchronizing marketplace product images after new items are created in Base.

- Built Docker workers that process queued synchronization tasks and retrieve product images through residential proxies.
- Used Google Sheets API as a shared job store, with locking, retry, and recovery logic to prevent duplicate or lost tasks.
- Designed the workflow to scale across multiple workers; the system has run continuously in production for 6+ months.

Technologies: Python, Docker, Google Sheets API, REST APIs, Web Scraping

eMAG Market Intelligence Platform

Marketplace data collection and analysis platform for product discovery, pricing history, and trend monitoring.

- Automated product discovery and pricing collection using HTML scraping and hidden API endpoints.
- Stored historical pricing data in MongoDB for long-term comparison and market trend analysis.
- Added local LLM summaries with Ollama to highlight relevant market movements.

Technologies: Python, MongoDB, Docker, Ollama

Automated B2B Lead Generation & Outreach Platform

End-to-end workflow for discovering businesses, enriching leads, and preparing personalized outreach.

- Combined Overpass API business discovery with website analysis and lead enrichment.
- Generated personalized outreach emails and automated scheduled runs with GitHub Actions.

Technologies: Python, Overpass API, Email APIs, GitHub Actions

Backend Document Management System

Backend application supporting secure authentication and document storage workflows.

- Implemented user authentication, PDF uploads, image handling, and document management features.
- Used SQLAlchemy ORM with PostgreSQL for structured data persistence.

Technologies: Python, PostgreSQL, SQLAlchemy

EDUCATION & LANGUAGES

Independent Study & Project-Based Learning: Backend engineering, automation, distributed systems, Linux, software architecture, and API-focused development.

Languages: Romanian (Native) | Spanish (Native) | English (B2 / Intermediate)
